

Warehouse Radio Planning Pack

Step 1, Plan Your Talkgroups

Fewer talkgroups usually work better. List each team, how many radios it needs and which groups it joins.

Example, 100 radios across 5 talkgroups

Team	Radios	Talkgroups
Management	10	All groups
Goods-in	25	Goods-in, All Call
Picking and packing	35	Picking, All Call
Loading bays and yard	20	Dispatch, All Call
Maintenance	10	Maintenance, All Call

Your site

Team	Radios	Talkgroups

Before you programme the radios

- ☐ Each team has one main talkgroup
- ☐ Managers can hear the ground floor groups
- ☐ Hands-free kit agreed for forklift drivers
- ☐ Man down and lone worker set up for night shifts

Warehouse Radio Planning Pack

Step 2, Test Your Site

Use this during your trial. Make a test call from each area and tick the result.

Inside the warehouse

Area	Clear	Patchy	Dropped	Notes
Basement	☐	☐	☐	
Goods-in	☐	☐	☐	
Racking aisles	☐	☐	☐	
Mezzanine	☐	☐	☐	
Cold store	☐	☐	☐	
Loading bays	☐	☐	☐	
Yard	☐	☐	☐	
Offices	☐	☐	☐	

Beyond the site

Area	Clear	Patchy	Dropped	Notes
Call to a driver on the road	☐	☐	☐	
Call to a manager at another site	☐	☐	☐	

Basements are the most common dead spot.
A router adding WiFi alongside 4G usually fixes it.
